

# Lookbook 2019

:hager

Düsseldorf, MedienHafen (Media Harbour)

**A partner  
made for  
you.**

# Building trust through building management.

**Making energy into an enterprise: This has been our driving mantra for over 60 years. And it is on this basis that we want to build the future with you: Level by level, room by room, from the energy distribution and cable routing all the way through to the building control system.**

**The eye plays a vital role in this building process. That's why we've gathered together some of the most stunning solutions from our product range for you in this Lookbook. Let yourself be inspired, and let us play a role in shaping your vision. We will be only too happy to work together with you as your partner to make these solutions a reality – no matter how high your ambitions may be.**

**Energy and installed  
distribution boards up to  
4000 A**  
from page 6

**Cable routing and room  
connection systems**  
from page 40

**Switch ranges, building  
control system and door  
communication**  
from page 96

**Manufaktur**  
from page 146

**Tools and services**  
from page 164

# Content

As your partner, we combine people, standards and technologies over the entire course of your projects – from the initial tender to the final acceptance. And above all, we make sure everything is done to your complete satisfaction.

# The look of energy

## **Energy and installed distribution boards**

Energy distribution is the heart of a building. We make sure it keeps beating – with full vigour. Not just for the present, but for many years to come as well. Up to 4000 A.

## 01 | 02

Energy distribution system Hager  
unimes H

Leaves a powerful impression – even  
with glass doors

# 03

## 03

**Hager Varioline**, the pluggable system with compact circuit breakers up to 800 A

## 04

**Hager HIC**, automatic load transfer with motor drive and energy management up to 1600 A

### Energy distribution system unimes H

With the distribution system unimes H, type-tested energy distributors with a cabinet depth of up to 800 mm and feed currents of up to 4000 A are established. The benefits of this include internal room partitioning that is clear, well arranged and enables the expansion of inner compartments as per EN 61439-1 and -2 up to design 4

An internal arc test as per IEC/TR 61641 as proof of protection for persons and systems makes unimes H a safe solution

## Energy distribution system unimes H The most important areas at a glance

### 01

The busbar system up to 4 x 80 x 10 mm achieves 4000 A and short-circuit resistance  $I_{CW}$  (1 s) of 100 kA. Can be installed at the top, in the centre or at the bottom.

### 02

The open circuit breaker provides maximum performance at minimum device volumes; can be configured as fixed installation or with plug-in technology.

### 03

The copper connection of main busbars to the device is made with commercially available copper bars and screws. A connection bracket that can be mounted with no drilling required allows rapid connections to be made.

### 04

Maximum safety for persons and systems thanks to a passive or active arc fault protection system as well as earthquake and shock testing.

### 05

A neutral platform with only two base cabinets forms the basis for an efficient, type-tested low-voltage distribution system.

### 06

The transport separation brackets are mounted on a single side. This way, two cabinets can be easily pushed together.

### 07

Adjustable reactive power compensation systems with type-tested quality components in convenient plug-in technology reduce reactive energy and costs along with it.

### 08

The main busbars can be coupled in the cabinet without any loss of space at the sides. This reduces the loss of power and the demand for copper.

### 09

Functional areas such as busbar units and cable connection areas can be optimally separated from one another. This way, you have a choice of implementing design 2b, 3b or 4a/b.

### 10

The four-pin busbar system UST4 can be used as an additional distribution busbar. With Cu 2 x 20/30/40 mm for currents up to 1600 A in connection technology with no drilling required.

### 11

The entire system technology from unimers N high current is available for expanding the unimes H modular cabinet. If necessary, it can also be implemented in design 2b.

### 12

The optimum arrangement of the bars provides plenty of free space and a neatly organised cable connection. Cable clamping rails that can be flexibly installed provide tension relief.

11

12

01

02

01

**Hager univers free-standing cabinet**

Installed distribution board 400 A for efficient DALI lighting control and visualisation for energy monitoring

**Hager univers wall-mounted cabinet**

Transformer cabinet for distribution network operator-approved measurements up to 400 A

02

**Hager univers free-standing cabinet**

Energy distribution for devices up to 1250 A, protection class IP55 including stationary base

03

**Hager h3 and h3+**

Compact circuit breakers and load break switches up to 1600 A

01

**01**  
**Hager univers free-standing cabinet**  
 Energy distribution 1600 A for efficient lighting and differentiated measurements for energy monitoring

**02**  
**Hager univers free-standing cabinet**  
 Energy distribution 1600 A with NH fuse switch disconnectors

**03**  
**Hager univers wall-mounted cabinet**  
 Installed distribution board 400 A with switching and protective devices

**04**  
**Hager univers modular cabinet**  
 Energy distribution with NH fuse switch disconnectors in size 1–3 and integrated transformers for energy measurement

## 01 | 02

### Hager univers free-standing cabinets

For a variety of application areas, e.g. hotels and office buildings

## 02

# 03

## 03

Shopping centres with large numbers of shops require individualised energy measurement. We'll provide you with the right solution

01

**01**

**Hager univers Z**

Meter panel system for direct measurement

**02**

**Hager univers Z**

Meter panel system for transformer measurement

**02**

## 01 | 02

### Hager univers Z

Meter panel system with integrated attachment and contacting device connection technology for electronic household meter (eHZ). The modular design guarantees flexibility for future smart metering applications.

## 03

### Hager univers Z

Meter panel system for direct measurement for all meter types, with distribution network operator-compliant design

03

Zähleranlage 1  
Haus 2

# 01

## 01

### Hager univers Z

Meter panel systems that can even fit into particularly narrow space requirements

## 02

An electronic household meter (eHZ) is an essential component of an intelligent electricity network (smart grid). Standardisation, ease of installation via plug-in technology and the possibility to perform a meter change free of interruption are just some of the advantages that the eHZ system brings. With solutions that include an adapter with ACD and additional space, existing systems can be converted to an eHZ meter panel

# 02

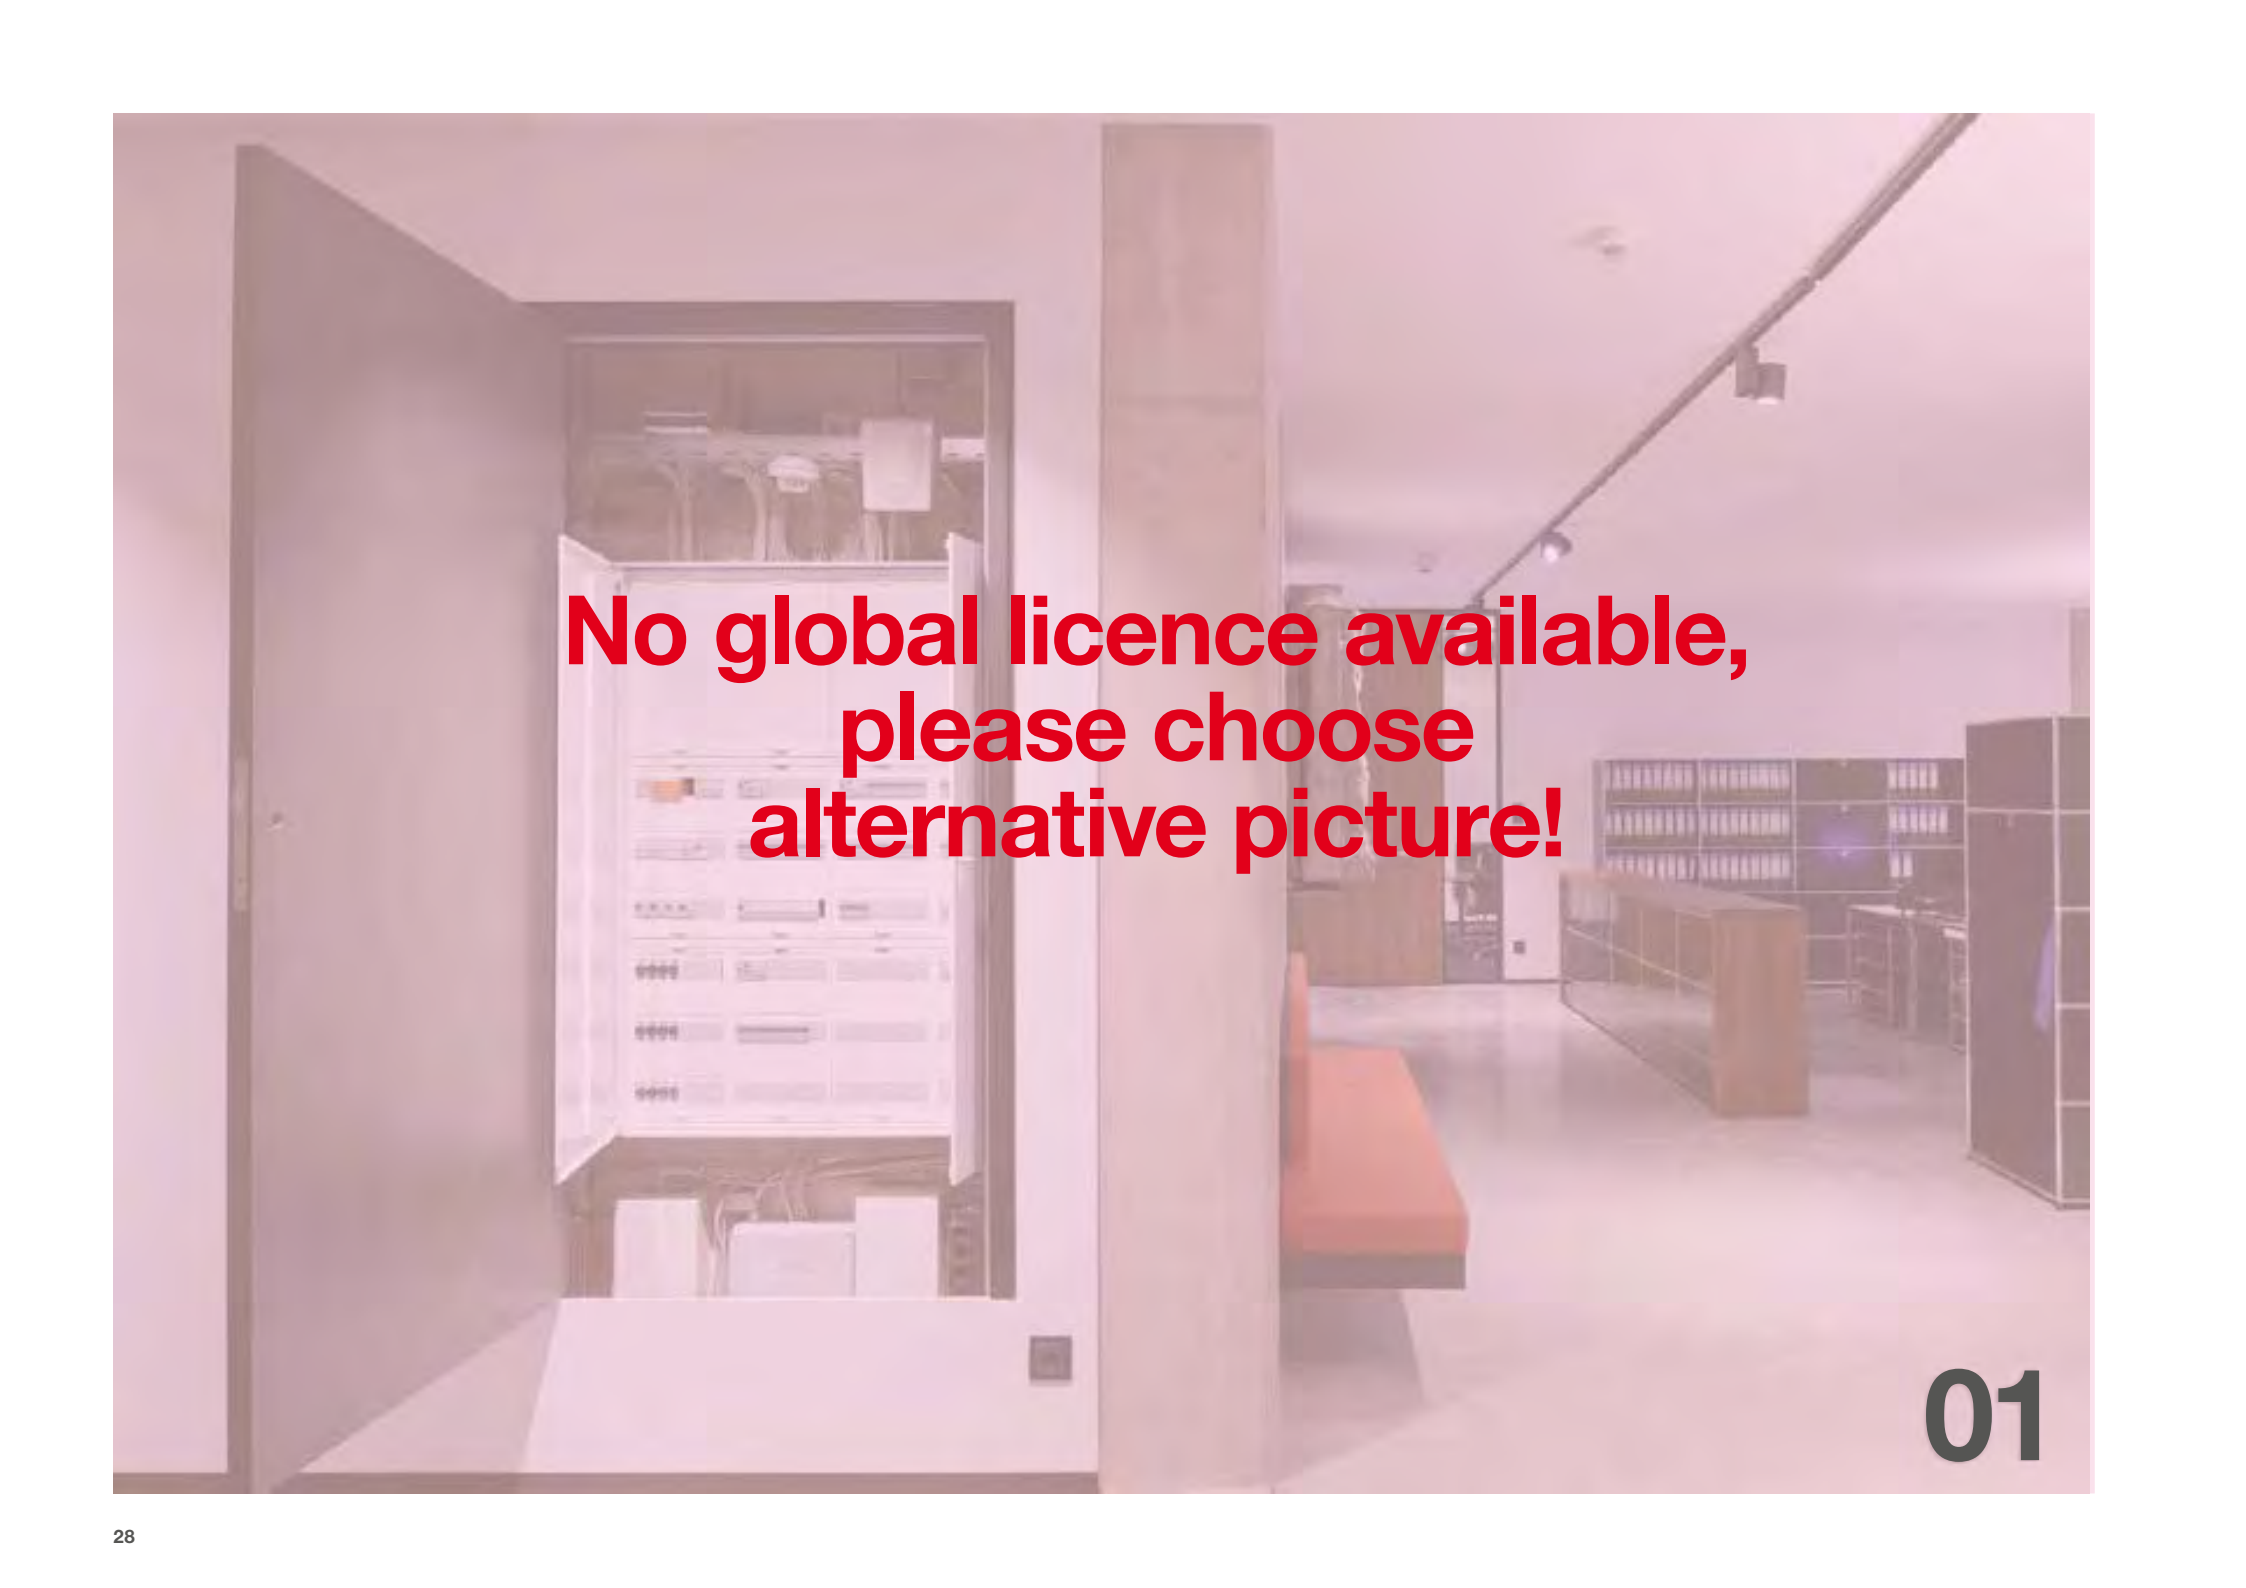

### **Hager univers Z**

Meter unit with integrated attachment and contacting device connection technology for eHZ pluggable meters.

Cabinet for detached house incl. feed through the photovoltaic system, measurement according to the requirements of the KfW development bank and intelligent KNX building system

Feed from below. With wall panel

**Home connection boxes** provide a connection between the public grid and private consumers

## 01

**Power distribution columns** as secure solutions for power distribution at festivals and markets, which can either be fixed in place at the location or implemented as a mobile version – a simple and safe solution

## 02

**Meter connection cabinets** for outdoor use with up to six meter panels

# 01

02

# The look of flexibility

## **Cable routing and room connection systems**

A reliable supply of energy and data to large rooms – anywhere and at any time. To achieve this the goal, we are breaking new ground with our products: In floors, on walls and on ceilings. And these products retain the same flair for quality that has made us into a leading supplier in this segment.

# The look of individuality

## **Manufaktur**

Standard solutions are a thing of the past. Today, there is an ever-growing demand for products that are made to measure: "Individualisation", as the mega trend is known. Hager's Manufaktur can make your ideas and individual requests a reality.

# Where our customers' dreams become reality.

"Our manufactory provides a creative setting in which our customers' wishes can fully take shape – from the first sketch to the very last polish."

(Erwin van Handenhoven, Design Director of the Hager Group)

01

When Madonna or George Clooney spend a night in Berlin, they switch the light on using a berker 1930 series switch. Although, that's not quite right – because the switch isn't a simple series model. The words CEILING and LAMPS were printed on the switch at our manufactory, according to the customer's wishes and unique to the Soho House in Berlin. To create an atmosphere in which every tiny detail is perfectly coordinated, and nothing is left to chance, a series product became a unique item.

02

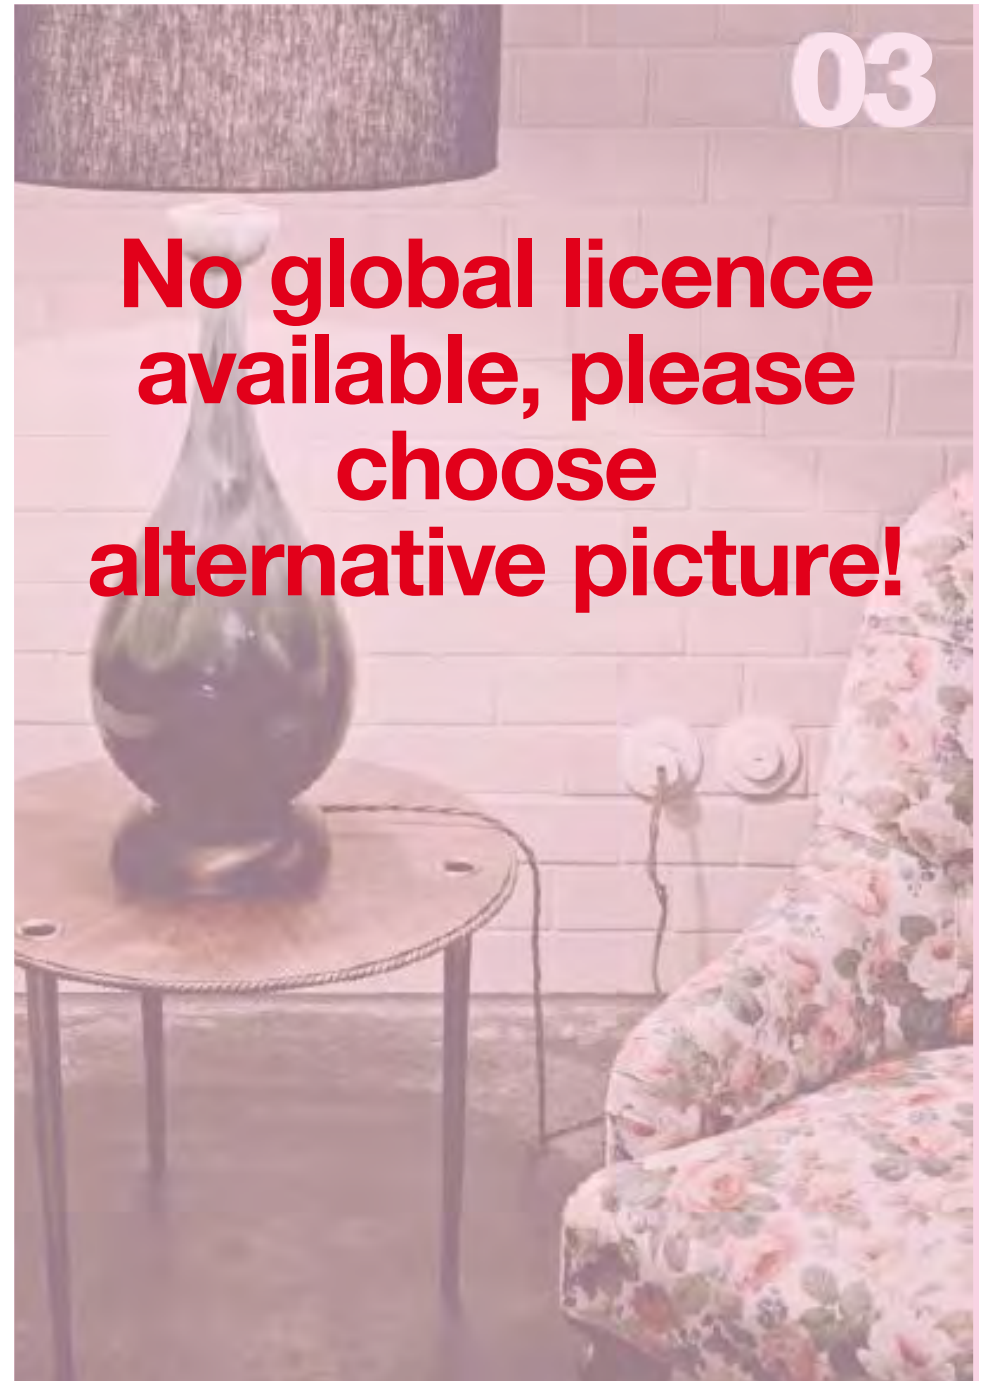

The detail in the detail. **berker serie 1930 Porzellan (porcelain) made by Rosenthal**, with individual labelling.

**berker Q.7 mineral colours, matt**

Colour options:

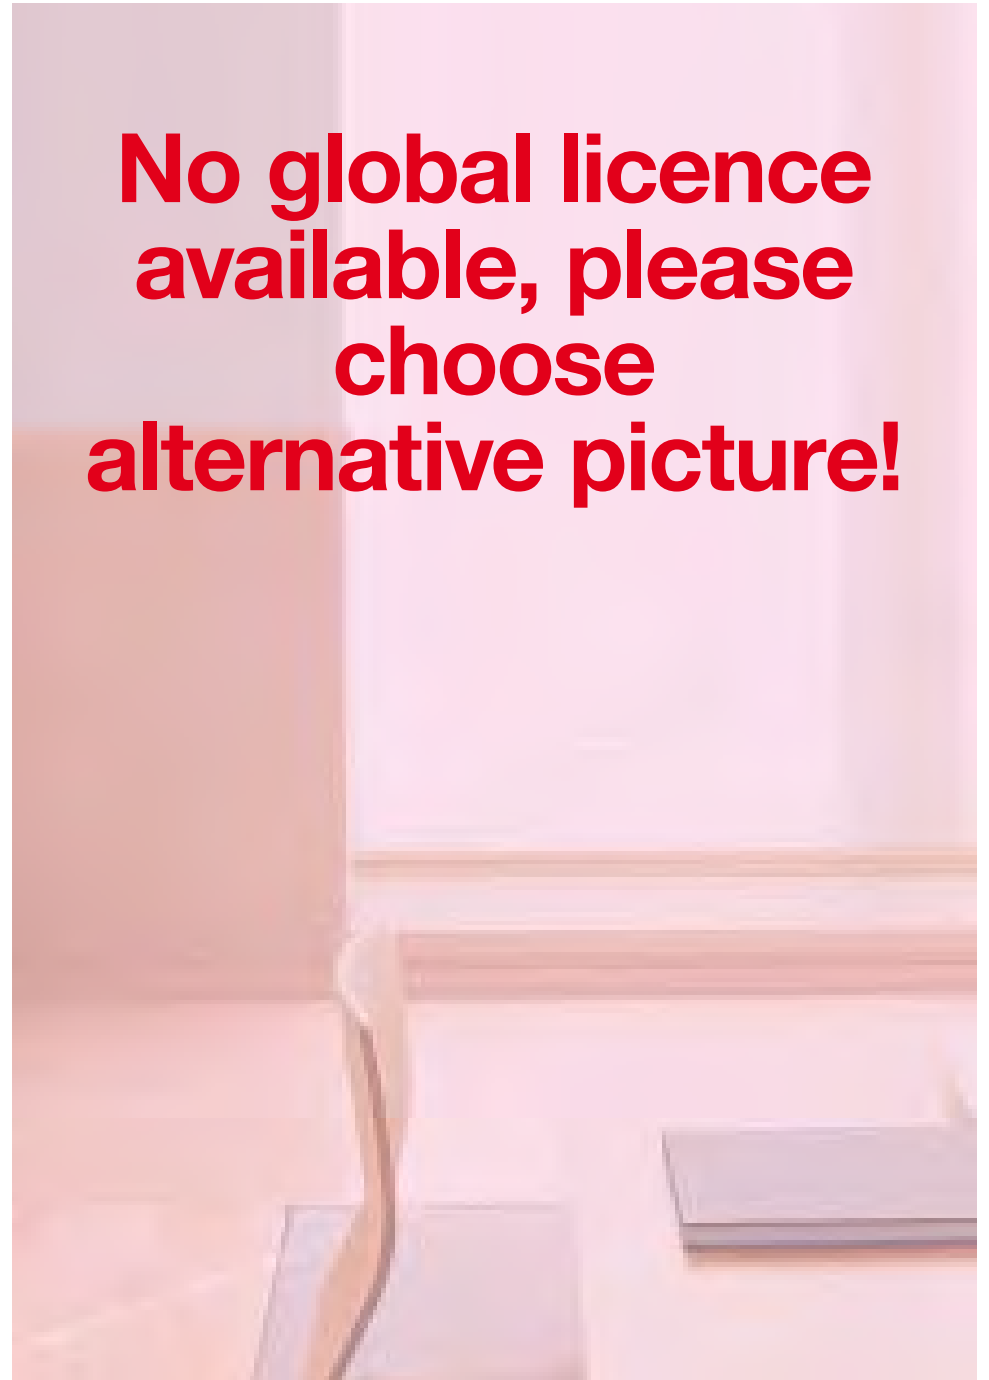

Sand brown, pebble blue, rose quartz,  
pebble grey, mineral mint, moonstone  
blue, basalt green and seashell

Architectural projects are designed to last a small eternity. Doesn't it make a nice change to reflect the latest trends through the interior? This idea was the inspiration behind our decision to incorporate colours into the edition that are part of an emerging trend: Mineral colours.

Erwin van Handenhoven, Design Director of the Hager Group, put together the colour spectrum for the edition. The installation has a certain timelessness to it, thanks to its shape and the combination with white.

# 01

## 01

### **elcom.axent external video station**

Individually equipped, in stele design. Door communication columns are replacing doormen. And just as a doorman can bend down to speak to a child, or grant access for lorries, you can choose different column heights: Sitting, standing or tall enough to enable communication with lorries. You can design the column with any Elcom elements. You can even integrate a letterbox which opens towards the front or back.

## 02

Freedom of choice:

Loudspeaker, camera, call button, access control...

all functional elements can be combined in any configuration. Depending on the external dimensions of the front panel, the functional elements fit into standard **elcom.axcent** flush-mounted or surface-mounted housings with no need for screws – or into larger wall sections and hollow walls using a screw fixture.

The dimensions of the front panels can be scaled individually within the limits of what our machines can do.

# Beauty with a practical side.

## 01 Special designs

Sheet steel is the material of choice here. It can take almost any shape imaginable and blend into its surroundings perfectly. If requested, you will also receive dado trunking ex-works, fully fitted and wired so that it is ready to connect.

## 02 Special dimensions

A single step for stress-free construction: Made-to-measure cable routing ducts. We have the experience and the tools to cut even delicate materials like stainless steel perfectly. Simply order via the manufactory.

## 03 Special colours

The entire palette of RAL colours and RAL design colours, Sikkens paints, NCS paints, DB colours and bathroom colours as well as a diverse range of film options are available for you to choose from when it comes to using the cable routing to highlight certain features. Additionally, manufacturer-specific mixtures and powder coatings with metallic effects are available. You also have the option to vary the material. For example, stainless steel, V2A steel or V4A steel – natural, polished or brushed.

# Tools and services

The background of the slide features a blurred image of a person wearing a white shirt, likely in an office or control room setting, with a computer monitor visible. Overlaid on this is a large, light gray gear graphic that is partially obscured by the title text.

We'll supervise your project from beginning to end. More specifically: From the initial tender, through the planning stage, all the way through to final commissioning. With our tailor-made software solutions, we will guide you step by step to your goal. We're even happy take it a step further, and assist you by providing competent specialists on-site.

# Win tenders: hagerplan

When you need to get to the point and be punctual, just five steps will suffice. With hagerplan, it's that easy to put together successful specifications that leave nothing out. Self-explanatory, licence-free, standard-compliant – and either manufacturer-neutral or aligned to a certain product as required.

[hager.de/hagerplan](https://hager.de/hagerplan)

## 01 Project editor

This is where you input your individual project data, with your own reference text if desired. For practicality, you will also receive the article numbers for cable routing and room connection systems as required. This facilitates the order process.

## 02 Select standards

Under "settings", select your standard default settings for numbering, output formats and text lengths, which can then be individually adjusted at any time.

## 03 Specifications configuration

Then the specifications configuration begins: The properties of your assemblies can be determined simply by clicking on them. Now continue to input the quantities of the products and accessories – and the result will be given in the specifications list.

## 04 Preview

The complete part specifications are displayed for you in PDF format – including project data, an overview with order numbers, reference texts, items, page numbers and amount carried forward. Does everything look right? If not, adjustments can be made at any time.

## 05 Export

Afterwards, generate your specifications and export them as a Word, PDF, or GAEB-XML file. Finally, they can be imported into any standard tendering, awarding and invoicing program. For laying systems, you can also carry out a cost estimate that facilitates the overall costing.

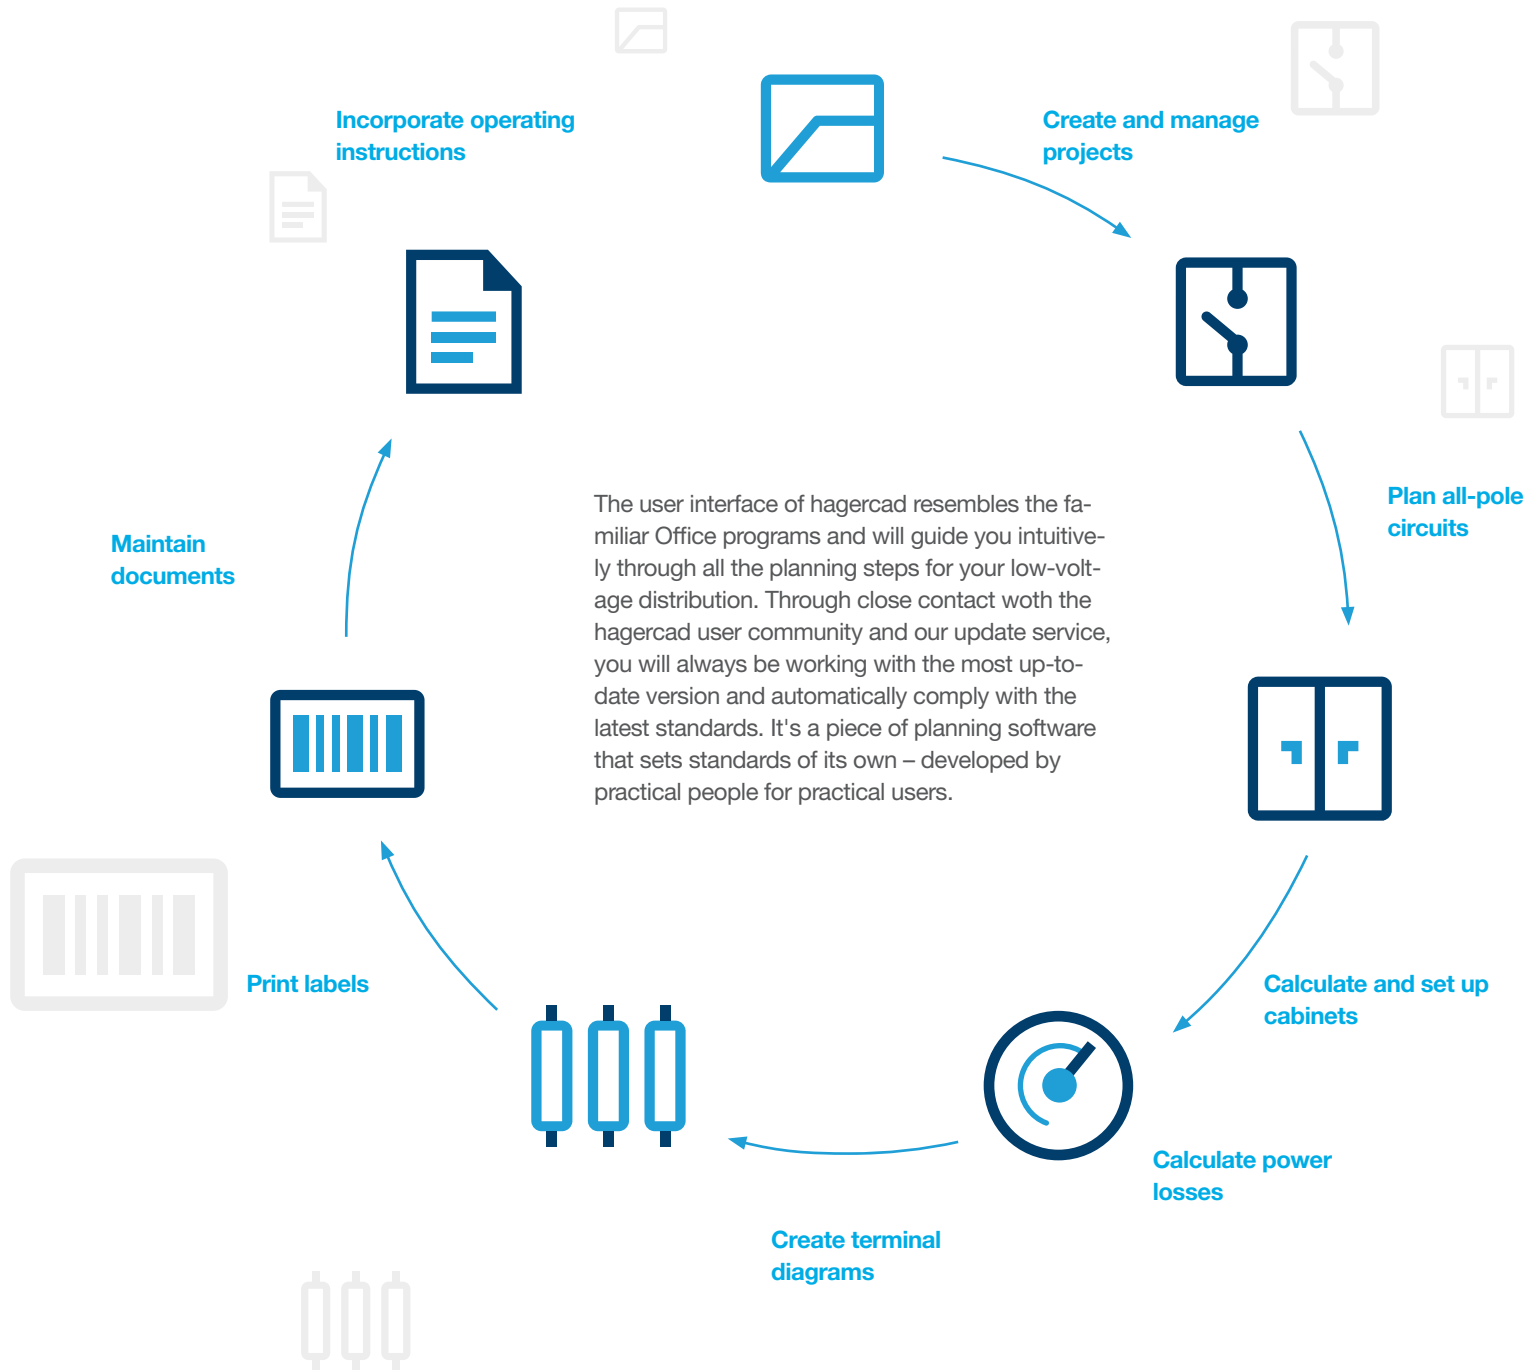

# Calculating switching systems: hagercad

More reliability in planning, less time required: With hagercad, you can configure low-voltage switch-gears more simply and clearly than ever before – even in 3D, if desired. Seven modules that are perfectly attuned to one another will support you in all planning and documentation steps.

[hager.de/hagercad](http://hager.de/hagercad)

Incorporate operating instructions

Create and manage projects

Plan all-pole circuits

Maintain documents

Calculate and set up cabinets

Print labels

Calculate power losses

Create terminal diagrams

# Visualise projects: With BIM

Quick, efficient and clear: Building Information Modeling (BIM) allows for complete digital planning of new buildings in 3D. From now on, you can import all underfloor systems and dado trunking systems from Hager as BIM objects in all common BIM programs – available at [hager.de](http://hager.de) or direct in the cross-manufacturer BIM data portal.

[hager.de/bim](http://hager.de/bim)

[bimobject.com/hager-group](http://bimobject.com/hager-group)

**Benefits for you**

- Simple download in Revit and ArchiCAD format
- Automatic error prevention
- Display and resolve planning conflicts
- Adherence to agreed deadlines

# Technology and design from a single source

For a building project to be truly successful, everything has to fit neatly together – technologies and technical standards, structure and design, measurements and schedules. And that is why we provide you with every service from a single source: Future-proof electronic technology from Hager, acclaimed switch ranges from Berker and the perfect door communication systems from Elcom. Having a dedicated contact for all three areas gives you ultimate peace of mind that everything in your project is running smoothly.

# We're here for you.
